

ABRAHAM MARKUS

Senior Full-Stack Software Engineer (MERN) | Abuja, Nigeria

07038028108 · abraham.markus.dev@gmail.com · linkedin.com/in/abraham-markus-67514331b

PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with 3+ years of progressive experience — advancing from individual contributor to Senior Engineer — building and scaling production-grade MERN applications across e-commerce, SaaS, and enterprise domains. Promoted to Senior Engineer within 18 months at V-Tech by consistently delivering outsized results: a **25% uplift in e-commerce transaction volume**, a **30% reduction in API response times**, and a **40% drop in bug recurrence** through disciplined engineering. Equally strong in technical leadership — defining architecture, mentoring engineers, and communicating trade-offs clearly to both technical and non-technical stakeholders. Seeking a senior or lead role where deep full-stack expertise drives measurable product impact.

WORK EXPERIENCE

Software Engineer | ZipTech Limited

Abuja, Nigeria Nov 2025 – Present

- **Led end-to-end delivery** of 5+ full-stack web applications and high-conversion landing pages using React.js, TypeScript, and Tailwind CSS — personally owning each project from technical scoping through production launch, achieving Lighthouse performance scores consistently above 90 across all major browsers.
- **Drove a ~30% reduction in API response times** by redesigning query structures and refactoring Express.js middleware architecture, improving throughput and eliminating bottlenecks under peak traffic without requiring infrastructure changes.
- **Initiated a codebase health programme** — introducing Jest unit test suites, feature flags, and structured refactoring sprints — cutting bug recurrence by ~40%, reducing post-release hotfixes, and raising overall deployment confidence team-wide.
- **Eliminated 2 design-iteration rounds per sprint** by embedding directly with UI/UX designers during the wireframing phase, surfacing technical constraints early and translating Figma prototypes into WCAG-accessible, pixel-accurate interfaces.
- **Championed Agile delivery discipline** — facilitating stand-ups, sprint planning, and retrospectives — establishing a culture of clear ownership that maintained 100% on-time milestone delivery across all active projects.

Senior Software Engineer | V-Tech

Enugu, Nigeria Mar 2023 – Oct 2025

- **Promoted to Senior Engineer within 18 months** based on demonstrated technical leadership — took ownership of system architecture decisions, established team coding standards, and conducted all production deployment reviews across a portfolio of 15+ client-facing applications serving thousands of users.
- **Generated a 25% increase in client transaction volume and a 15% drop in cart abandonment** by architecting and launching 3 e-commerce platforms with end-to-end Stripe and Paystack payment integration — results directly cited in client Q1 growth reports within the first quarter of deployment.
- **Achieved zero critical security incidents** over a 2.5-year production lifespan by engineering JWT and OAuth 2.0 authentication systems from scratch across all products, eliminating unauthorised access vulnerabilities and hardening data protection.
- **Delivered 4 major projects on time and under budget** by leading structured requirements workshops with 10+ stakeholders — clients, product managers, and developers — translating complex business objectives into well-scoped, executable technical roadmaps.
- **Grew junior engineers to independent contributors within 3 months** through fortnightly 1-on-1s, live code reviews, and pair-programming sessions — improving team PR approval rate by 35% and reducing review cycle times significantly.

KEY ACHIEVEMENTS

25% transaction uplift	3 e-commerce platforms drove measurable client revenue growth in Q1 post-launch.
30% faster API responses	Middleware and query redesign eliminated bottlenecks without infrastructure changes.
40% fewer production bugs	Unit testing + structured refactoring programme raised deployment confidence team-wide.
Zero security incidents	JWT/OAuth 2.0 systems maintained a clean record across 2.5 years in production.

35% better PR approval	Mentored 2 junior engineers to independent feature delivery within 3 months.
100% on-time delivery	All sprint milestones met or exceeded across both roles through Agile discipline.

TECHNICAL SKILLS

Frontend	React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap, PWAs
Backend	Node.js, Express.js, RESTful API Design, JWT, OAuth 2.0
Database	MongoDB, Mongoose
DevOps & Tools	Git, GitHub, Jest, Lighthouse, Agile / Scrum
Practices	System Architecture, Code Review, Technical Mentorship, Stakeholder Communication

EDUCATION

B.Sc. Computer Science · Taraba State University	Graduated May 2024
